Lineas energy surcharge mechanism

Lineas mainly **operates in 4 countries** (BE, DE, FR, the NL). Cost and purchasing situation of energy per country varies considerably.

Lineas is implementing a model that reflects the **additional cost per country** for domestic traffic (start and end of a transport are in the same country).

For **international traffic**, Lineas is using a basket which is based on the share of energy consumption per country.

The reference base for the surcharge is the **electricity price** for the next month, published on the 25th of every month at the EEX Future market.

For each country, the respective **future price applies** (e.g. for Belgium it is the “EEX Belgian Power Futures”).
